

# AWS IAM ACTIVITIES

## ACTIVITY 1 – IAM Users & Authentication

1. Create an IAM user named: intern-user1
2. Enable AWS Management Console access
3. Set a custom password
4. Log in using the IAM user and verify:
  - You cannot access S3
  - You cannot access EC2

### Expected Outcome

- User exists

The screenshot shows the AWS IAM Users page. At the top, a green success message box displays: "User created successfully" with a checkmark icon, followed by the text "You can view and download the user's password and email instructions for signing in to the AWS Management Console." Below the message is a "View user" button. The main table has columns: User name, Path, Group, Last activity, MFA, and Password age. A single user, "intern-user1", is listed with the following details: Path "/", Group "0", Last activity "2 minutes ago", MFA "-", and Password age "3 minutes". The table includes a search bar, sorting icons, and navigation buttons. At the bottom of the table, there is a "Delete" button.

**Users (3) Info**

An IAM user is an identity with long-term credentials that is used to interact with AWS in an account.

User name	Path	Group:	Last activity	MFA	Password age
<a href="#">intern-user1</a>	/	0	2 minutes ago	-	3 minutes

**intern-user1 Info**

**Summary**

ARN <a href="#">arn:aws:iam::558460665550:user/intern-user1</a>	Console access ⚠ Enabled without MFA	Access key 1 <a href="#">Create access key</a>
Created January 27, 2026, 22:44 (UTC+05:30)	Last console sign-in Today	

- Login works
- Everything shows Access Denied

EC2 Instances

Instances Info

You are not authorized to perform this operation. User: arn:aws:iam::558460665550:user/intern-user1 is not authorized to perform: ec2:DescribeInstances because no identity-based policy allows the ec2:DescribeInstances action

Retry Diagnose with Amazon Q

```
C:\Users\260016598>aws configure
AWS Access Key ID [*****63GK]: AKIAYEBWZP3HEEUY4ETN
AWS Secret Access Key [*****L4GL]: 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
Default region name [eu-north-1]: eu-north-1
Default output format [json]: json

C:\Users\260016598>aws s3 ls

C:\Users\260016598>aws s3 ls

An error occurred (AccessDenied) when calling the ListBuckets operation: User: arn:aws:iam::558460665550:user/intern-user1 is not authorized to perform: s3>ListAllMyBuckets because no identity-based policy allows the s3>ListAllMyBuckets action
```

## ACTIVITY 2 – IAM Groups & Permission Inheritance

### Tasks

1. Create two IAM groups:  
BackendTeam, DatabaseTeam
2. Add intern-user1 to BackendTeam
3. Attach AWS managed policy:  
○ AmazonS3ReadOnlyAccess to BackendTeam

BackendTeam user group created.

**BackendTeam** Info

**Summary**

User group name: BackendTeam | Creation time: January 27, 2026, 22:59 (UTC+05:30) | ARN: arn:aws:iam::558460665550:group/BackendTeam

**Permissions**

**Permissions policies (1)** Info

You can attach up to 10 managed policies.

Filter by Type

Policy name	Type	Attached entities
AmazonS3ReadOnlyAccess	AWS managed	1

Add permissions

DatabaseTeam user group created.

**DatabaseTeam** Info

**Summary**

User group name: DatabaseTeam | Creation time: January 27, 2026, 23:00 (UTC+05:30) | ARN: arn:aws:iam::558460665550:group/DatabaseTeam

4. Login as intern-user1 and:
- List S3 buckets (should work)
  - Upload file (should fail)

```
C:\Users\260016598>aws s3 ls
2026-01-27 11:26:19 meghna-backend-s3
```

```
C:\Users\260016598>echo "Meghna" > file.txt
C:\Users\260016598>aws s3 cp file.txt s3://meghna-backend-s3/file.txt
upload failed: ./file.txt to s3://meghna-backend-s3/file.txt An error occurred (AccessDenied) when calling the PutObject operation: User: arn:aws:iam::58460665550:user/intern-user1 is not authorized to perform: s3:PutObject on resource: "arn:aws:s3:::meghna-backend-s3/file.txt" because no identity-based policy allows the s3:PutObject action.
```

### Questions to Answer:

#### ● Why upload is denied?

Since we have used AmazonS3ReadOnlyAccess policy for the group, it only grants read permissions for the s3 buckets. Other permissions are not included. For intern-user1 to be able to upload files and do other operations we need to enable other policies.

#### ● Where did the permission come from?

intern-user1 is a part of BackendTeam user group, and we attached the AmazonS3ReadOnlyAccess policy for the BackendTeam group. So, the permission to list all buckets came from there.

## ACTIVITY 3 – Custom Policy Using Visual Editor

### Scenario:

Backend team needs:

- Read & write objects in one specific S3 bucket
- No delete permission

### Tasks

1. Create a policy using Visual Editor
2. Service: S3
3. Allow:
  - GetObject
  - PutObject
  - ListBucket
4. Restrict access to: my-backend-bucket

The screenshot shows the AWS IAM Policies page. At the top, a green banner indicates that the policy 'BackendS3' has been created. Below this, the title 'Policies (1443)' is followed by a link to 'Info'. A note states: 'A policy is an object in AWS that defines permissions.' To the right are buttons for 'View policy', 'Actions', 'Delete', and 'Create policy'. A search bar contains the text 'Backends3'. A filter bar says 'Filter by Type' with 'All types' selected. The main table lists the single policy created:

Policy name	Type	Used as	Description
BackendS3	Customer managed	None	-

## Permissions defined in this policy [Info](#)

Permissions defined in this policy document specify which actions are allowed or denied. To define permissions

```

1  {
2      "Version": "2012-10-17",
3      "Statement": [
4          {
5              "Sid": "VisualEditor0",
6              "Effect": "Allow",
7              "Action": [
8                  "s3:GetObject",
9                  "s3:PutObject",
10                 "s3>ListBucket"
11             ],
12             "Resource": [
13                 "arn:aws:s3:::meghna-my-backend-bucket",
14                 "arn:aws:s3:::meghna-my-backend-bucket/*"
15             ]
16         }
17     ]
18 }
```

## 5. Attach policy to BackendTeam

## ACTIVITY 4 – Custom Policy Using JSON Editor

### Scenario

Frontend team can:

- Start/Stop only one EC2 instance
- Cannot access other instances

### Tasks

1. Create a policy using JSON editor
2. Allow actions:
  - ec2: StartInstances
  - ec2: StopInstances
  - ec2: DescribeInstances
3. Restrict resource to: One specific EC2 instance ARN

### Permissions defined in this policy Info

Permissions defined in this policy document specify which actions are allowed or denied. To define permissions for a

```
1 [{}  
2     "Version": "2012-10-17",  
3     "Statement": [  
4         {  
5             "Sid": "VisualEditor0",  
6             "Effect": "Allow",  
7             "Action": [  
8                 "ec2:StartInstances",  
9                 "ec2:StopInstances"  
10            ],  
11            "Resource": "arn:aws:ec2:eu-north-1:558460665550:instance/i-0ff6dd4618793f843"  
12        },  
13        {  
14            "Sid": "VisualEditor1",  
15            "Effect": "Allow",  
16            "Action": [  
17                "ec2:DescribeInstances"  
18            ],  
19            "Resource": "*"  
20        }  
21    ]  
22 ]
```

4. Create group: FrontendTeam
5. Attach policy
6. Test by logging in as frontend user

**FrontendTeam** [Info](#) [Delete](#)

**Summary** [Edit](#)
